

how the **SOUND BEGINNINGS** language system for babies works

1.) INFANTS ARE BORN WITH ALL FIVE SENSES: SIGHT, SMELL, TASTE, TOUCH AND HEARING.

Babies use all five of these senses to learn about the world around them.

2.) AUDITORY STIMULATION CAN ENHANCE A BABY'S BRAIN DEVELOPMENT.

Sound Beginnings language development audio downloads give babies a sound background.

3.) SOUND BEGINNINGS CAN CREATE TONAL MEMORIES ON THE RAPIDLY GROWING BRAIN CELLS.

Tonal memories can enhance language acquisition possibilities later in life.

4.) DEVELOPED FOR AGES 0-18 MONTHS.

Using native voices and traditional music that keep in sync with each language's rhythm, Sound Beginnings is played for infants at an early age.

5.) LISTENING ACTIVATES NEURAL PATHWAYS AND INCREASES SOUND RECOGNITION SKILLS.

Making it easier for your child to become bilingual or multilingual.
